

Appendix 12-1-4 Error Handling for EDIFACT message

In NACCS, when an error occurs within an EDIFACT message (other than PADIS EDIFACT format) sent from a user, an error message will be created using 3 types of EDIFACT message depending on types of errors. In addition, for a message which is sent in form of multiple-message, error results will be returned for each stored EDIFACT message.

The following shows EDIFACT error message output from NACCS.

1. CONTRL Message

(1) Purpose for use

For "Confirmation of receipt" in response to a receipt confirmation request of an EDIFACT message sent from user, and notification of syntax errors when there is a syntax error in an EDIFACT message, CONTRL messages should be used.

- Confirmation of receipt: It is up to user's selection whether to use CONTRL messages for confirmation of receipt, and the message is output only when "1" is specified in the "Receipt confirmation request" column in UNB segment of an EDIFACT message.
- Notification of error: When there is a syntax error in an EDIFACT message sent from user, the message will be output regardless of designation set by user (UNB receipt confirmation request). The major cases of syntax errors are such as errors in message format and exchange protocol.

(2) Unit of creation

One CONTRL message is created for one EDIFACT message (one exchange) from user.

(3) Segment structure

[1] When function groups are not used

When function groups (UNG through UNE) are not used in a Process Request message sent from user, Segment Group 1 for CONTRL messages should be used.

[2] When function groups are used

When function groups (UNG through UNE) are used in a Process Request message sent from user, Segment Group 3 for CONTRL messages should be used.

2. APERAK Message

(1) Purpose for use

This is used for notification of common error which is output when a Process Request message based on an EDIFACT message sent by user becomes an error before procedure processing at the Main Processing System. The following shows major cases of "common error."

- Case where there is no User Code.
- Case where the user is unauthorized for this service.

(2) Unit of creation

One APERAK is created for one common error created at the Main Processing System.

3. CUSRES Message

(1) Purpose for use

This is used for notification of procedure error which is output when a Process Request message based on an EDIFACT message sent by user becomes error during process at the Main Processing System.

(2) Unit of creation

One CUSRES is created for one procedure error created at the Main Processing System.

4. Mapping Table

For CONTRL messages, refer to "Table A12-1-6 CONTRL Segment Table (with function group)", "Table A12-1-7 CONTRL Mapping Table (with function group)", "Table A12-1-8 CONTRL Segment Table (without function group)", "Table A12-1-9 CONTRL Mapping Table (with function group)."

For APERAK messages, refer to "Table A12-1-10 APERAK Segment Table" and "Table A12-1-11 APERAK Mapping Table."

For CUSRES messages, refer to Mapping Tables for each procedure.

5. Code List

For action codes and syntax error codes used in CONTRL messages, refer to "Table A12-1-12 CONTRL Error Code."

(Table A12-1-12)

Listed below are action codes and syntax error codes used in CONTRL messages used by NACCS.

Action codes (Data element 0083)

Code value	Content
4	There is an error in the pertinent level.
7	There is not an error in the pertinent level.

Syntax error codes (Data element 0085)

Code value	Content
13	No segments.
15	Too many repetitions of segments.
16	Too many elements in the segment.
17	Invalid message identifier.
18	Unidentified error.
28	Control reference number error.
29	Control count error.
31	There is a mix of different messages in the group.
39	Too large element length.
40	Too small element length.
