
4026. Arrival Date Registration

Procedure Code	Procedure Name
PID	Arrival Date Registration

1. Procedure Outline

Register collectively ("The vessel arrived at the discharging port") for each vessel after the Manifest is submitted. Also, register and correct the Date of Arrival for each vessel. In addition, if this procedure is performed for a vessel for the first time, the following processes are automatically started.

- [1] Process of import declaration, etc., for cargo for which ("The import declaration etc. is automatically started immediately after arrival") has been registered
(For details, see "Import declaration (IDC)" procedure.)
- [2] Discharge container information registration process for a container for which ("The discharge container information registration is automatically started") has been registered.
(For details, see "Discharge Container Information Registration (DCL02)" procedure.)
The above automatic starting process is not performed if the procedure is performed again for the vessel. As a result, if this procedure is performed for the first time, the submission status of the Cargo Manifest by each carrier using the vessel must be checked first.

2. Implementer

Carrier, Shipping Agent, CY

3. Limits

Nil

4. Input Conditions

(1) Implementer verification

- [1] The implementer is a user already registered in the system.
- [2] If the implementer is a Carrier, the "Manifest Submission (DMF)" procedure is performed for the Carrier.
- [3] If the implementer is a Shipping Agent, the consignment relationship with the carrier using the ship (in which the DMF procedure is performed for the port of discharge entered) is registered in the system.
- [4] If the implementer is a CY, the CY performs the discharge operation specified by the "Manifest Information Registration (MFR)" procedure.

(2) Input field verification

(A) Individual field verification

See "List of Input Fields" and "System Design Specification for NACCS Online Procedures".

(B) Data linkage verification

See "List of Input Fields" and "System Design Specification for NACCS Online Procedures".

(3) Manifest Management DB check

- [1] The Manifest Management DB for the vessel information entered*¹ exists.
- [2] The carrier using the vessel exists for which ("The Cargo Manifest is submitted") is registered.
- [3] The "Discharge confirmation registration(Separate) (PKK)" procedure or the "Discharge confirmation registration(Blanket) (PKI)" procedure is not performed.

(*1) The vessel information consists of the following 4 items. (The same applies hereinafter.)

- [1] Vessel Code
- [2] Carrier Code
- [3] Port of Discharge Code
- [4] Port of Discharge Suffix

5. Processing Details

(1) Input data verification

If the above-mentioned input conditions are met, the Process Result Code "00000-0000-0000" should be set before proceeding to the steps that follow.

If the above input conditions are not satisfied, which means an error, output the Process Result Output after setting a code other than "00000-0000-0000" in the Process Result Code. (For error details, see "List of Process Result Codes".)

(2) B/L Number extraction process

If the container (including an empty container / the same applies hereafter) is registered in the Manifest Management DB when this procedure is performed for the vessel, extract only B/L information for the carrier using the vessel for which the Cargo Manifest has already been submitted at the port, from the B/L information for which the preliminary registration of the import declaration immediately after arrival in relation to the vessel information entered.

(3) Manifest Management DB process

- [1] ("The arrival confirmation has been completed at the relevant port") is registered.
- [2] Register the Date of Arrival entered.

(4) Cargo Information DB process

For the cargo for the extracted B/L Number extracted, register ("The final declaration process is automatically started").

(5) Final declaration starting process of the import declaration immediately after arrival

For the cargo for the extracted B/L Number extracted, automatically start the final declaration process.

(6) Discharge container information registration process

If the container is registered in the Manifest Management DB when this procedure is performed for the vessel, and if ("The DCL02 procedure is performed simultaneously at the time of confirming the arrival at the relevant port") is registered, automatically start the process.

(7) Output process for the output information

Process the output information (described later). For details of output field, see "List of Output Fields".

(8) Output process of warning message

Output ("Internal process being executed") in the Process Result Output as a warning message.

6. Output Information

Information Name	Output Conditions	Output Destination
Process Result Output	Nil	Implementer
Information on the discharge container registration during Customs office hours	This procedure is performed during the off-hours of the Customs Station, and the information is registered by the discharge container information registration during the business hours of Customs Station.	Submitter of Discharge Container List

s

7. Special Notes

- (1) Even if there exist more than one CY that perform the discharging operation specified by the MFR procedure and more than one carrier using the vessel and registered by the MFR procedure, all processes for the CYs and the carriers using the vessel are performed when any of the users perform this procedure.
- (2) Caution
The final declaration starting process of the import declaration immediately after arrival or the discharge container information registration process for the carrier using the vessel which didn't carry out the DMF procedure at the time of performing this procedure is not performed. In this case, for cargo for which a preliminary declaration of the final declaration invocation process of the import declaration immediately after arrival is registered, the final declaration starting process is performed when the PKK or the PKI procedure is performed
- (3) The Date of Arrival registered by this procedure is reflected in the Date of Arrival of the cargo and the container for the vessel when the PKK procedure or the PKI procedure is performed. In addition, even if the different Dates of Arrival are entered by the DMF procedure and if the "Update Manifest Information (CMF01 or CMF02)" procedure after this procedure is performed, the Date of Arrival entered by this procedure is reflected. Note that, for the cargo and containers for direct delivery (import) with import permits or with preliminary declaration completed cannot be corrected at once. Therefore, the information must be corrected individually in the CMF01 procedure or CMF02 procedure.
