2.3.3 NACCS connection router (for dedicated line and fiber optic broadband connections)

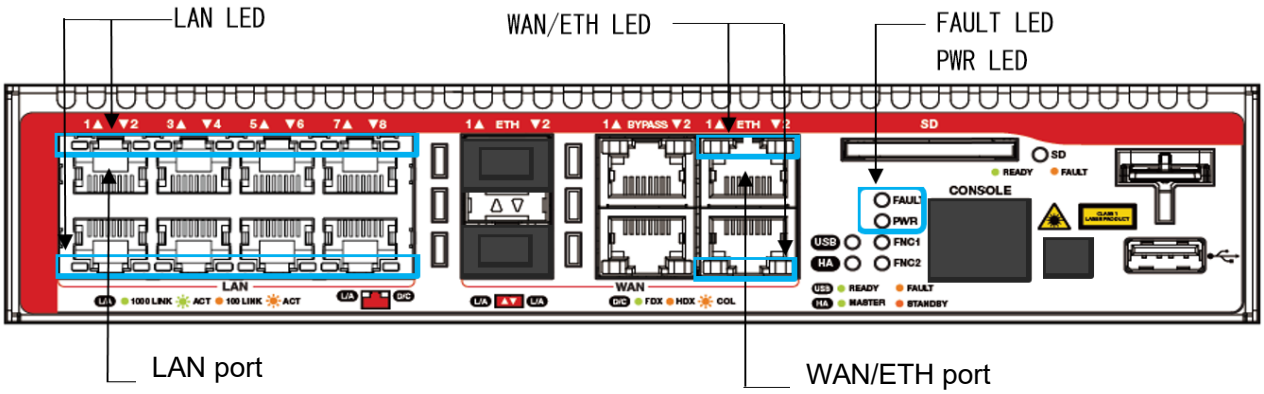

Figure 2.3.5 Front Face

FAULT LED	: Lights up in the event of failure.
PWR LED	: Lights up when electrical power is supplied.
WAN/ETH LED	: Shows the connection status and network operating conditions of WAN-side port (ETH0, ETH1).
LAN LED	: Shows the connection status of each network port on LAN-side, and operating condition of the network.
WAN/ETH port	: Ethernet port on WAN-side. NACCS Center server-side interface.
LAN port	: LAN-side Ethernet port. User LAN-side interface.

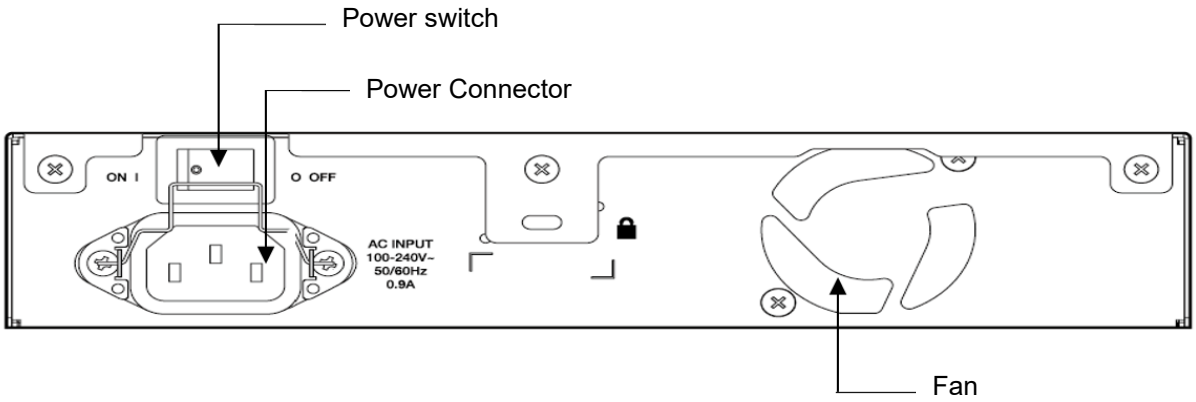

Figure 2.3.6 Back Face

Fan : Discharges the heat inside. Take care not to cover up this hole when setting up.

Power connector : For connecting power cable.

Power switch : Turns the power supply on/off.

Table 2.3.3 Specifications

Mounting port	WAN : 10/100/1000BASE-T(RJ-45 connector) ×2 LAN : 10/100/1000BASE-T(RJ-45 connector) ×8
Power supply unit	Frequency: 50-60Hz Average power consumption：18W (maximum 23W) Average heat value：65kJ/h (maximum 81kJ/h) Maximum input current：0.44A Input voltage：AC100V-240V External power：none Power cable：AC power cable for 100V Socket outlet：3-pin, with earthing contact（See [!]）
LAN interface	Supported standards：IEEE 802.3 10BASE-T, IEEE 802.3u 100BASE-TX, IEEE 802.3ab 1000BASE-T
Supporting protocol	IP
Outline dimension	210(W)×220(D)×42.5(H)mm (excluding projection)
System requirements	Operation temperature: between 0 and 50 degrees Celsius Operation humidity: below 80 % (no condensation) Storage temperature: between -20 and 60 degrees Celsius Storage humidity: below 95 % (no condensation)
Weight	1.7kg

[!] For the NACCS connection router, a socket outlet with 3-pin earthing plug (OA socket outlet) should be used without fail. Note that when routers fail due to the fact that socket outlets with a 3-pin earthing plug are not used, the repair costs, etc. should be borne by the user.
