2042. Booking Information Change

Procedure Code	Procedure Name
ВКС	Booking Information Change

1. Procedure Outline

(1) Correcting or cancelling the booking information

Correct or cancel the booking information if it is changed or registered in the Booking Information Registration (BKR)" procedure.

If the "Vacant Container Pickup Registration (PUR)" procedure has already been done for the cancelled Container Size Code and Container Type Code when the booking information is corrected or cancelled, also cancel the vacant container pickup order information registered in the system.

- (2) Booking not permitted of Booking Request information If the Booking Request information (booking) registered by the Booking Request Registration (BRR)" has an error (e.g., insufficient information or no space in the ship), the Booking Request cannot be accepted (hereafter, "Booking not permitted"). This procedure responds to the Booking Request for each Booking Application Number by outputting ("Booking not permitted"). However, if the BKR procedure is performed for the Booking Application Number, this procedure cannot be performed.
- 2. Implementer
 - (1) Correction or cancellation

Carrier, Shipping Agent, CY

- (2) Booking not permitted Carrier, Shipping Agent
- 3. Limits
- [1] When the information is corrected, the maximum number of Container Size Codes and Container Type Codes that can be registered for a combination Carrier Code and Booking Number is 5.
- [2] When the information is corrected, the maximum number of Booking Container Quantity that can be registered for registered for a combination Carrier Code and Booking Number is 200.
- [3] The Carrier Code and the Booking Number can be corrected up to 99 times.
- 4. Input Conditions
 - (1) Implementer verification
 - (A) Correction or cancellation
 - [1] The implementer is a user already registered in the system.
 - [2] If the implementer is a Carrier, the implementer must be a user for the Carrier Code entered.
 - [3] If the implementer is a Shipping Agent, the implementer must be a registrant of the booking information for the Carrier Code and Booking Number entered.
 - [4] If the implementer is a CY and the information is changed, the implementer must be a user registered as a Port of Loading CY or a Place of Receipt CY in the booking information for the Carrier Code and Booking Number entered.

- (B) Booking not permitted
 - [1] The implementer is a user already registered in the system
 - [2] The implementer must be a user registered as a Carrier or Shipping Agent in the Booking Request Information for the Booking Application Number entered.
- (2) Input field verification
 - (A) Individual field verification

See "List of Input Fields" and "System Design Specification for NACCS Online Procedures".

- (B) Data linkage verification See "List of Input Fields" and "System Design Specification for NACCS Online Procedures".
- (3) Vessel DB verification

If the Vessel for Loading Code entered is not "9999", the Vessel DB must exist for the Vessel for Loading Code entered.

(4) Loading Management DB verification

When the information is corrected and if the Loading Management DB for the Vessel for Loading Code, Port of Loading Code and Voyage Number entered exists, ("Cargo is loaded") is not registered.

- (5) Booking Information DB verification
 - (A) Correction
 - [1] The Booking Information DB for the Carrier Code and Booking Number entered exists.
 - [2] If the "Vacant Container Delivery Information Registration (PCD)" procedure is done for the Container Size Code and Container Type Code registered in the Booking Information DB, check the following.
 - The Container Size Code and Container Type Code that are the same as the Container Size Code and Container Type Code to which the PCD procedure is performed are entered in any column.
 - The number of Booking Container Quantity entered exceeds the number of containers that have been delivered by the PCD procedure.
 - [3] If the implementer is a CY, the data in the following items matches the data registered in the Booking Information DB.
 - Notification Forwarding Party Code (Port of Loading CY)
 - Notification Forwarding Party Code (Place of Receipt CY)
 - Notification Forwarding Party Code (Others)
 - [4] The Booking Application Number is not changed.
 - (B) Cancellation

The Booking Information DB for the Carrier Code and Booking Number entered exists.

- (6) Booking Request Information DB verification
 - (A) Correction

The Booking Request Information DB for the Booking Application Number entered exists.

- (B) Check the following for "Booking not permitted".
 - [1] The Booking Request Information DB for the Booking Application Number entered exists.
 - [2] The BKR procedure or the "Response to Booking Request (BRA)" procedure are not performed.
- 5. Processing Details
 - (1) Input verification

If the above-mentioned input conditions are met, the Process Result Code "00000-0000-0000" should be set before proceeding to the steps that follow.

If the above input conditions are not satisfied, which means an error, output the Process Result Output after setting a code other than "00000-0000-0000" in the Process Result Code. (For error details, see "List of Process Result Codes".)

- (2) Booking Information DB process
 - (A) Correction

Update the DB according to the entered data.

(B) Cancellation

Register that the data is invalidated in the Booking Information DB.

(3) Vacant Container Pickup DB process

If the Vacant Container Pickup DB linked to the Carrier Code and the Booking Number entered exists, do the following process:

(A) Correction

If the Container Size Code and Container Type Code are changed and if the Vacant Container Pickup DB for the Container Size Code and Container Type Code cancelled exists, register that the data is invalidated.

(B) Cancellation

Register that the data is invalidated in the Vacant Container Pickup DB.

(4) Booking container information DB process

When the data is cancelled and if the Booking Container DB linked to the Carrier Code and the Booking Number entered exists, register that the data is invalidated.

In the case of cancellation and if the booking/container information DB associated with the entered carrier code and the booking number exists, it shall be registered that the data has become invalid.

- (5) Booking Request Information DB process For "Booking not permitted", register "Booking not permitted" in the Booking Request Information DB.
- (6) E-mail process (to send an e-mail)Register that the booking registration is done in the Booking Request Information DB.
- (7) Output process of output information Process the output information (described later). For details of output field, see "List of Output Fields".

6. Output Information

Information Name	Output Conditions	Output Destination
Process Result	Nil	Implementer
Output		-
Booking Information Registration Notifying Information	 Output the information for each application number if all conditions below have been satisfied: (1) When the data has been corrected, the Port of Loading CY is entered. (2) The Port of Loading CY is changed*1. (3) ("The Booking Information Registration Notifying Information has been output to the Port of Loading CY entered") has been registered in the system. 	Port of Loading CY entered
	 Output the information for each application number if all conditions below have been satisfied: (1) When the data has been corrected, the Place of Receipt CY is entered. (2) The Place of Receipt CY has been changed*1. (4) ("The Booking Information Registration Notifying Information has been output to Place of Receipt CY entered") has been registered in the system. 	Place of Receipt C entered
	 Output the information for each application number if all conditions below have been satisfied: (1) When the data has been corrected, the notification forwarding party (Other) is entered. (2) The notification forwarding party (Other) has been changed. 	Notification forwarding party (Other) entered.
Booking	Correction	Implementer
Information Correction Notifying Information	 Output the information for each application number if all conditions below have been satisfied: (1) The data is corrected (2) The implementer and the Booking Information Registrant are different. 	Booking Informatic Registrant
	 Output the information for each application number if all conditions below have been satisfied: (1) When the data is corrected, the Port of Loading CY is entered. (2) The Port of Loading CY is not changed.*1. (3) The implementer and the Port of Loading CY are different. (4) ("The Booking Information Correction Notifying Information is output to the Port of Loading CY entered")is registered in the system that the booking information correction notifying information is output to the Port of Loading CY entered. 	Port of Loading C
	 Output the information for each application number if all conditions below have been satisfied: (1) When the data is corrected, the Place of Receipt CY is entered. (2) The Place of Receipt CY is not changed^{*1}. (3) The implementer and the Place of Receipt CY are different. (4) The Place of Receipt CY and the Port of Loading CY entered are different. (5) ("The Booking Information Correction Notifying Information is output to the Place of Receipt CY") is registered in the system. 	Place of Receipt C

Information Name	Output Conditions	Output Destination
	Output the information for each application number if	Notification
	all conditions below have been satisfied:	forwarding party
	(1) When the data is corrected, the notification	(Other) entered
	forwarding party (Other) is entered.	
	(2) The notification forwarding party (Other) is not	
	changed.	
Vacant Container	Output the information for each application number if	User who did the
Pickup Order	all conditions below have been satisfied:	PUR procedure
Deletion Notifying	(1) The data has been corrected	
Information	(2) The data registered in the Vacant Container Pickup	
	DB linked to the Carrier Code and Booking Number	
	entered have been cancelled.	
Vacant Container	Output the information for each application number if	Implementer
Pickup Order	all conditions below have been satisfied:	•
Cancellation	(1) The data has been corrected.	
Notifying	(2) The data registered in the Vacant Container	
Information	Pickup DB linked to the Carrier Code and the	
	Booking Number entered has been cancelled.	
	Output the information for each application number if	Booking
	all conditions below have been satisfied:	information
	(1) The data has been corrected.	registrant
	(2) The data registered in the Vacant Container	rogiotiant
	Pickup DB linked to the Carrier Code and the	
	Booking Number entered has been cancelled.	
	(3) The implementer and the Booking Information	
	Registrant are different.	
	Output the information for each application number if	Vacant container
	all conditions below have been satisfied:	pickup order
	(1) The data has been corrected.	application
	(2) The data registered in the Vacant Container	destination
	Pickup DB linked to the Carrier Code and the	registered in the
	Booking Number entered has been cancelled.	Vacant Container
	Booking Number entered has been cancelled.	Pickup DB ^{*3}
	Output the information for each application number if	Notification
	all conditions below have been satisfied:	forwarding party
	(1) The data has been corrected.	(Others) registered
	(2) The data registered in the Vacant Container	in the Booking
	Pickup DB linked to the Carrier Code and the	Information DB
	•	
Booking	Booking Number entered has been cancelled. Output the information for each application number if	User who did the
Information	all conditions below have been satisfied:	BRR procedure
Correction	(1) The data has been corrected.	
	(2) The Booking Application Number has been	
Notifying	entered.	
Information		Dealing
	Output the information for each application number if	Booking
	all conditions below have been satisfied:	forwarding party
	(1) The data has been corrected.	registered in the
	(2) The Booking Application Number has been	Booking Request
		Information DB
	entered.	
	(3) The booking notifying forwarding party has been	
	(3) The booking notifying forwarding party has been registered in the Booking Request Information DB.	
Booking	 (3) The booking notifying forwarding party has been registered in the Booking Request Information DB. Output the information for each application number if 	Booking
Information	 (3) The booking notifying forwarding party has been registered in the Booking Request Information DB. Output the information for each application number if all conditions below have been satisfied: 	Information
Information Cancellation	 (3) The booking notifying forwarding party has been registered in the Booking Request Information DB. Output the information for each application number if all conditions below have been satisfied: (1) The data has been corrected. 	0
Information	 (3) The booking notifying forwarding party has been registered in the Booking Request Information DB. Output the information for each application number if all conditions below have been satisfied: 	Information

Information Name	Output Conditions	Output Destination
	Output the information for each application number if	Port of Loading CY
	all conditions below have been satisfied:	registered in the
	(1) When the data has been corrected, the Port of	Booking
	Loading CY is changed ^{*1} or cancelled.	Information DB
	(2) ("The Booking Information Cancellation Notifying	
	Information has been output to the Port of Loading	
	CY registered in the Booking Information DB") has	
	been registered in the system.	
	Output the information for each application number if all conditions below have been satisfied: (1) When the data is corrected, the Place of Receipt	Place of Receipt CY registered in the Booking
	CY is changed ^{*1} or cancelled. (2) The Place of Receipt CY registered in the Booking	Information DB
	Information DB and the Port of Loading CY registered are different.	
	(3) ("The Booking Information Cancellation Notifying Information has been output to the Place of	
	Receipt CY registered in the Booking Information DB") has been registered in the system.	
	When the data has been corrected, the notification	Notification
	forwarding party (Other) is changed or cancelled.	forwarding party (Others) registered in the Booking Information DB
	Output the information for each application number if	User who did the
	all conditions below have been satisfied:	PUR procedure ^{*2}
	(1) The data has been cancelled.	
	(2) The Vacant Container Pickup DB linked to the Carrier Code and the Booking Number entered	
	exists. (3) A user who did the PUR procedure registered in the Vacant Container Pickup DB and the notification forwarding party (Others) registered in	
	the Booking Information DB are different.	
Booking Cancellation	Output the information for each application number if all conditions below have been satisfied:	User who did the BRR procedure
Notifying Information	(1) The data has been cancelled.(2) The Booking Application Number has been	
	registered in the Booking Information DB	
	Output the information for each application number if	Booking
	all conditions below have been satisfied:	notification
	(1) The data has been cancelled.	forwarding party
	(2) A Booking Application Number has been	registered in the
	registered in the Booking Information DB	Booking Request
	(3) The booking notification forwarding party has been	Information DB
	registered in the Booking Request Information DB.	
Reject Notification for Booking	The booking is not permitted.	User who did the BRR procedure
Request	Output the information for each application number if	
	all conditions below have been satisfied:	
	(1) The booking is not permitted.	
	(2) The booking notification forwarding party has been	
	registered in the Booking Request Information DB.	
Booking	Output the information for each application number if	E-mail address
